FT 6-79
July 1979

TOBACCO: WORLD SUPPLY AND DISTRIBUTION, 1974-78

World tobacco consumption in 1978 rebounded from a slight decline in 1977 to register a 4 percent increase. Consumption was up in many countries, notably Brazil, West Germany, the United Kingdom, and the United States. Increased economic activity in these countries generally aided the upswing in tobacco consumption.

World trade also rose in 1978, with the United Kingdom and the United States the leading importer and exporter, respectively. Importers responded to the high-quality 1978 U.S. harvest and favorable dollar prices by raising imports of U.S. leaf to a record level.

This circular should be used in conjunction with "World Tobacco Supply and Distribution, 1959-77" (FT 2-78, June 1978) for a complete 1959-78 data series.

In 1978, the **United Kingdom** replaced West Germany as the leading volume importer of tobacco. Most of the increased leaf imports originated in the United States. While tobacco consumption rose in the United Kingdom, much of the increased import volume was destined for reexport. The increase in U.K. beginning stocks for 1979 reflects tobacco intended for transshipment to other European Community countries. The United Kingdom's trade data include reexport of 44,815 tons in 1978, up from 4,834 tons in 1977. It is estimated that as much as 50,000 tons of leaf from 1978 imports remain to be reexported.

West German imports were up 12 percent in 1978; however, the increased imports originated in several leaf exporting countries rather than one major supplier. Apparent tobacco consumption recovered from the low levels of 1976 and 1977 to reach 166,000 tons in 1978.

Brazil's consumption made another significant jump (6 percent) in 1978. Dry-weight production rose 6 percent in response to increased domestic and export demand. Exports in 1978 were 8 percent above the 1977 level.

Tobacco production in **Greece** was up 8 percent in 1978. However, stocks rose despite a 32 percent increase in exports and an 8 percent increase in domestic consumption. Production continues to exceed consumption by a 4-to-1 margin, with the export market offering only partial relief. Stocks increased to a record level of 244,000 tons—up 10 percent from that of 1977.

Turkey's increased exports and consumption failed to ease the domestic stock buildup. The 19 percent increase in production contributed to a 22 percent buildup in stocks. Turkish exports rebounded to the 77,000-ton level but failed to reach their 1972 peak of 124,000 tons. Consumption of tobacco in Turkey paralled world consumption with a 4 percent increase.

The **United States** tobacco industry experienced positive gains in production, consumption, imports, and exports. Dry-weight production increased 6 percent and leaf quality was very good. Exports (including reexports) increased 11 percent to a record level of 320,861 tons. Domestic consumption was up 12 percent to 677,000 tons, but was well below the 1963 peak of 751,837 tons.

World stock levels reached a peak in 1969 after increasing over a 7-year period. After 1969, manufacturers began to draw down carryover stocks until 1975, when a slight increase occurred. Consumption increased 2 percent between 1974 and 1975 as the stock-consumption ratio reached its lowest point in the 1959-78 period. Consumption has continued its gradual increase, with the post-1975 stock buildup not quite as pronounced as the 1963-69 surge.

SMALLER WORLD TOBACCO PRODUCTION FORECAST FOR 1979

Early indications are that world production of unmanufactured tobacco will be down slightly in 1979 to 5.54 million metric tons, compared with 5.58 million tons in 1978. An expected 15 percent drop in both the U.S. and Turkish crops will not be entirely offset by anticipated increases in most other major producing countries. World flue-cured output is projected to drop 2 percent in 1979 to 2.3 million tons. Oriental production is also expected to decline 1 percent in 1979 to 948,000 tons. Burley production may be up 6,400 tons, an increase of 1 percent over the 1978 crop.

FLUE-CURED. Prospects for the 1979 flue-cured crop indicate a 2 percent reduction. The U.S. and Japanese crops are expected to be down 15 and 12 percent, respectively. Sizable increases forecast for the Brazilian, Rhodesian, and Polish crops will not be sufficient to counterbalance this drop.

U.S. flue-cured production is forecast at 473,432 tons, down 85,051 tons from the 1978 crop. A 10 percent reduction in planted area can be attributed in part to a 2 percent drop in the basic poundage quota set for 1979. When adjusted for overmarketings and carryover stocks, the actual effective quota was down 10 percent. The 1979 effective area allotment is 580,000 acres, with the effective poundage quota set at 1,070.2 million pounds (485,440 tons).

In Japan, domestic production continues to exceed consumption, resulting in a stock buildup of filler-quality domestic leaf. As a result, the Japanese government has authorized 1,100 fewer hectares for tobacco production in 1979. Consequently, flue-cured production is forecast at 88,000 tons, down 12,000 tons from the 1978 level.

Brazil's flue-cured harvest is estimated at 205,000 tons in 1979, a 15 percent increase over last season's crop. Stronger export demand and favorable farmer returns in 1977 and 1978 encouraged growers to plant 13 percent additional hectarage to tobacco.

BURLEY. World burley production is estimated to be up 1 percent in 1979. Expected increased output in South Korea, Brazil, and Malawi will more than offset declines in the United States and Italian crops. The U.S. crop is projected to be down 6,500 tons in 1979. A 3 percent reduction in the effective quota for 1979, in conjunction with larger carryover stocks and overmarketings in the last season, influenced a 3 percent drop in area planted to this year's crop.

The Italian burley crop is expected to drop 12 percent in 1979 to 40,000 tons. Some tobacco farmers who are experiencing a decrease in their returns are expected to switch to more profitable cash crops. In particular, some are expected to take advantage of a new tomato processing subsidy being offered this year.

Indications are that Malawi's burley production will continue to expand. A 29 percent increase is anticipated, placing 1979 production at 15,900 tons. It is not expected that this expansion will continue over the long term, however, because of a shortage of suitable tobacco land and experienced farm managers.

South Korea's burley production goal has been set at 47,800 tons, a 14 percent increase over the drought-stricken 1978 crop.

Brazil's burley production is expected to continue its upward trend; a 16 percent increase to 36,000 tons from a reduced area of 22,000 hectares is indicated for 1979. Better yields are anticipated through wider use of improved production techniques. A rapidly expanding domestic cigarette industry has been the basis for the growing demand for this type.

ORIENTAL. Oriental production for 1979 is estimated at 948,100 tons, a 1 percent drop from last season's level. The planned 8 percent increase in the Soviet Union is not enough to compensate for the 15 percent drop expected in Turkey's oriental crop, which is forecast at 244,000 tons, 15 percent below 1978 output. Producers are expected to reduce their plantings in anticipation of the enactment of the Tobacco and Tobacco Monopoly Law, which places restrictions on both area and production.

U.S. TOBACCO EXPORT VALUE HIGHER IN FIRST HALF OF 1979

During the first half of calendar 1979, tobacco contributed $756.1 million to the net U.S. foreign trade balance. This is 15 percent more than during the first 6 months of last year. Total export value of leaf and products reached $990.8 million. Cigarettes, with an export value of $432 million, made up 44 percent of this total. Duty-paid imports of leaf and products in the first half of the year totaled $234.7 million, up 8 percent from the level of the same period a year earlier.

UNMANUFACTURED LEAF EXPORTS

Unmanufactured tobacco exports during the first 6 months of calendar 1979 dropped 10 percent in volume compared with the same period a year earlier. Reduced shipments this season are anticipated as most major foreign buyers took advantage of the weaker U.S. dollar value and superior quality 1978 crop to replenish their stocks of U.S. tobacco last year. The European Community (EC) accounted for nearly all of the decline in exports during January - June 1979. Shipments to the EC of 54,700 metric tons were 17 percent below those of first-half 1978. The United Kingdom alone reduced purchases by 10,700 tons --a 43 percent drop.

A 22 percent decline in exports of stemmed flue-cured tobacco to 38,273 tons accounted for 85 percent of the decline in total U.S. leaf tobacco exports during the first half of the current year.

Other notable decreases were in the Stems and Other Unmanufactured, NEC, (blended strips) categories. Exports of these types fell by 27 and 70 percent, respectively.

MANUFACTURED TOBACCO EXPORTS

Cigarette shipments in the first half of the year showed a 13 percent increase in volume and a 26 percent jump in value. Belgium continues to be the largest export destination for U.S. cigarettes, having taken 19 percent of shipments in the first half of 1979. The United Arab Emirates, 13th largest market for the January - December 1978 period, has jumped to the second position this year with purchases of 3.8 billion pieces valued at $45 million. Iran, the second largest market last year, took only 431 million pieces, compared with 5.5 billion pieces in January - June 1978.

Cigars and Cheroots showed a sizable (18 percent) increase during the first 6 months of this year. Shipments to most major markets increased, with Canada and France doubling their purchases over those of the same period a year earlier.

Shipments of Smoking Tobacco in Bulk jumped from 166 tons to 4,784 tons during the first part of the season. Switzerland, the Canary Islands, and the Netherlands were the largest purchasers.

UNMANUFACTURED IMPORTS OF LEAF

Total unmanufactured imports for consumption increased 14 percent in volume during the first half of the year. Most of the gain was registered in the Scrap and Stems categories. Other Scrap Tobacco showed a 36 percent increase in volume and a 27 percent increase in value. However, the average price per kilogram declined 6 percent from $2.03 to $1.90. Brazil and South Korea continue to be the major suppliers of this type of tobacco.

Imports of flue-cured tobacco increased fivefold to a 6-month total of 3,315 tons. The unit value jumped from $1.56 per kilogram to $1.98 during the same period. Over 55 percent of this leaf came from Canada in the first half of 1979.

MANUFACTURED TOBACCO IMPORTS

Total manufactured product imports dipped 9 percent in volume and 3 percent in value thus far this season. The Manufactured and Not Manufactured, NSPF category, registered a 27 percent decrease in volume from the first half of last year. Pipe tobacco enters in this category. Cigar import volume fell 4 percent.

FT-9-79

GROWTH IN WORLD CIGARETTE OUTPUT EXPECTED TO CONTINUE IN 1979

World cigarette production in 1979 is expected to increase 1-2 percent to about the 4.3-trillion piece level. The rate of growth in recent years may have subsided for a number of reasons including: Price and tax increases, the general world inflationary trend, coupled with slowing economic growth, and escalating antismoking activities.

In many of the developing nations of the world, a large portion of the tobacco consumed has traditionally been in the form of roll-your-own cigarettes made from home-grown tobacco. Factory-made production has jumped sharply in these countries as rising incomes allowed smokers to switch rapidly to ready-made cigarettes. The general inflationary trend of recent years plus dramatic cigarette price hikes in many countries will tend to slow the switch of smokers from roll-your-own to the more expensive ready-mades.

The efforts of antismoking activities in many countries are beginning to be reflected in a leveling-off of per capita consumption. Nearly all of these campaigns, however, are conducted in the more developed countries, where per capita consumption is already relatively high and stable. Future growth in these markets is likely to be limited to population gains, rather than to increased per capita consumption. The campaigns have also prompted the cigarette industries to stress the low-tar and nicotine cigarettes. The share of the market held by this cigarette will undoubtedly grow in the future, as will the share of blended American-type cigarettes.

Summary of 1978

World cigarette production reached a record 4,242 billion pieces in 1978, up 2.6 percent from the 1977 level of 4,135 billion cigarettes. The United States accounted for nearly one third of the increase in total world production in 1978. Cigarette output in West Germany, Brazil, Yugoslavia, and South Africa made substantial gains as well.

World cigarette trade also expanded during 1978 as exports and imports increased 13 and 10 percent respectively. The discrepancy between total world exports and imports results primarily from incomplete statistics from importing countries, unreported cigarette trade in certain areas, and cigarettes in transit.

U.S. cigarette shipments rose 7.5 billion pieces to 74.4 billion pieces and were responsible for about one-fourth of the increase. A contractual agreement between Turkey and Yugoslavia (Turkish leaf tobacco exchanged for Yugoslavian cigarettes) helped boost world trade. The oil exporting countries of the Middle East continued to be an expanding market for cigarette imports, although recent events in Iran adversely affected that market.

Country Analysis 1978

UNITED STATES—U.S. cigarette output rebounded in 1978 from the 4-percent production decline in 1977. Reaching a record level of 696 billion pieces, 1978 production was 4.5 percent above the previous year's level.

Higher production served to increase manufacturer's inventories and to supply the expanding U.S. cigarette export market. Domestic consumption of U.S. cigarettes in 1978 totaled 616 billion, 1 billion less than in 1977.

Per capita use by persons 18 years old and over dropped 2 percent to 3,970 cigarettes—about 9 percent below the 1963 peak of 4,345. Therefore, despite a larger smoking age population, cigarette use has remained about the same over the past 3 years.

This trend is, in part, a result of increased antismoking publicity. That pattern is expected to continue through 1979.

Cigarette exports contributed a record $749 million to U.S. trade accounts in 1978, up 22 percent from that of 1977. The volume increased 11 percent to 74.3 billion pieces and the average value rose 10 percent from $9.20 per 1,000 to $10.08. Export volume continued up during the first 5 months of 1979, with an 11 percent rise over the export level for the same period in 1978. This occurred—despite the drastic decline in Iranian imports of U.S. cigarettes—largely as a result of dramatic increases in exports of U.S. cigarettes to Belgium-Luxemburg, the Netherlands Antilles, and the United Arab Emirates. Exports in calendar 1979 are forecast at about 80 billion pieces worth $810-820 million.

Cigarette production in the current year is expected to change little compared with 1978 output. Higher carry-in stocks and slack domestic sales will likely hold output below 700 billion pieces.

U.S.S.R.—Production of cigarettes and papyrosa was 377.4 billion pieces in 1978. Cigarettes accounted for 62.6 percent of the total with 60 billion being the filter type.

With several new factories to be opened soon, plans for 1979 call for an increase in total production of 12.7 billion pieces. The plans also call for smaller production of the papyrosa type and a 13.3-billion piece gain in filter cigarette output.

Imports of cigarettes declined by 3 percent in 1978 to 54.2 billion pieces. As domestic production increases in the future, the need for imports may decline slightly. Bulgaria supplies over 95 percent of Soviet cigarette imports and undoubtedly will continue to be the Soviet's major supplier for the foreseeable future.

BELGIUM-LUXEMBURG—Cigarette output declined 3 percent during 1978 reflecting a 10 percent reduction in cigarette consumption from the 1977 level. This new level, the lowest since 1970, is attributed to growing health concerns and a 14-percent retail price increase, which became effective October 15, 1977.

Blended cigarettes continued to be preferred by Belgian smokers, although gains in consumption of French-type dark tobacco cigarettes have occurred in recent years.

Exports of cigarettes continued their upward trend gaining 9 percent to 10.9 billion pieces and helped to offset the loss to manufacturers from lower domestic consumption. Exports are expected to continue to rise while domestic consumption is not likely to increase in 1979 due partly to the efforts of the National Anti-Tobacco Coordination Committee program. Cigarette manufacturers will continue to focus their advertising programs on the low tar and nicotine content of their products.

FRANCE—Reversing a recent downward trend, France increased cigarette production by a modest 1 percent during 1978 to 80.9 billion pieces. However, total cigarette retail sales dropped 1.7 percent to 82.5 billion pieces in 1978, which seems to indicate the effectiveness of the antitobacco campaign by the Ministry of Health.

The sales drop was shouldered entirely by domestic brands whose sales figures fell 5 percent during 1978. Imported cigarette sales, on the other hand, rose 20.2 percent and now make up roughly 16 percent of the French market. Imports continued their steady climb with a 21 percent rise during 1978 to 13.4 billion pieces.

The outlook appears optimistic for increased sales of American-type cigarettes. Total French consumption in 1979 will probably remain at the 1978 level with imports continuing to increase, though at a slower rate as new, stricter cigarette advertising regulations are fully enforced.

WEST GERMANY—German cigarette production increased by 9 percent to 149.7 billion pieces during 1978. This represents a partial recovery from the domestic sales slump in the preceding year (brought about by a substantial tax/price hike) and the continued rapid growth of cigarette imports. Per capita consumption of cigarettes by persons aged 15 years and more increased from 2,363 in 1977 to an estimated 2,520 in 1978. A substantial portion of the increase represented a shift from hand-rolled to factory-made cigarettes.

German cigarette exports climbed briskly, gaining 15 percent over the 1977 level, and reaching a new high of 27.8 billion cigarettes. Exports accounted for 18.6 percent of total production.

Industry observers expect an overall moderate rise in domestic sales of perhaps 2 percent for 1979. With exports continuing to grow, though at a somewhat slower rate, cigarette production is expected to increase by about 3 percent to an estimated 154 billion pieces in 1979.

ITALY—Cigarette production in 1978 decreased 5 percent from the previous year's total to 71.6 billion pieces. Imports, however, rose by 6 percent, with West Germany supplying the majority.

Sales of domestic brands declined 6.4 percent, while imported brands increased by 11 percent and foreign brands (produced in Italy under license) rose 5 percent. This reflects Italian consumers' increasing preference for foreign blends over domestic brands, which contain a higher proportion of dark tobaccos.

Total cigarette sales were officially regarded as down by about 1.6 percent. However, since unofficial imports account for an important share of overall cigarette consumption (estimates range between 10 and 20 percent in 1978), actual smoking may have increased by 2 percent above the 1977 level. Unofficial cigarette imports are believed to have risen significantly in 1978 because of the stronger lire and an average 20 percent increase in cigarette prices effective after April 1978.

Output and consumption in 1979 should remain close to their 1978 levels with foreign brands gaining a higher share of the market. Domestic cigarette production is expected to decline.

NETHERLANDS—Dutch exports of cigarettes in 1978 jumped 38 percent over the previous year's level with Italy, France, and Belgium-Luxemburg purchasing 95 percent of those shipments.

Though the domestic sales of cigarettes fell from 26.9 billion pieces in 1977 to 23.5 billion pieces in 1978, actual per capita consumption probably did not decrease significantly from the previous year's consumption. This is because the 1977 domestic sales figure was believed to have been exaggerated by sales to West German tourists who bought large quantities of the relatively cheap Dutch cigarettes during visits to the Netherlands. Since the price increase in February of 1978, this incentive no longer exists. Cigarette consumption in the Netherlands, however, is not expected to increase significantly in the future as the smoking and health issue is receiving rather prominent attention.

UNITED KINGDOM—The United Kingdom maintained its position as the world's fifth largest cigarette producer in 1978 as output rose 2 percent above the 1977 level. Although overall consumption of cigarettes remained static in 1978 at an estimated 125.2 billion, there were marked changes in the profile of the market, the most important of which was the growth in the market share of king size cigarettes to 58 percent by the year's end. This led to a 5 percent increase in leaf tobacco utilization to 146,000 tons.

Health considerations generally have appeared to affect cigarette types rather than influence overall demand. There has been a strong swing to filter-tipped, low-tar cigarettes with that type of cigarette now accounting for twice the proportional figure it held in 1972. Furthermore, by December 1978, higher tar cigarettes (20 mg. or higher) accounted for only 3 percent of the market compared with 15 percent earlier that year. That dramatic fall can be directly attributable to the tax surcharge imposed on high tar cigarettes beginning September 1978.

The five-fold increase in king size sales in less than 2 years is a result of the United Kingdom's adoption of the European Community system of taxation, which emphasizes tax on the finished cigarette rather than the traditional British duty on the weight of unmanufactured tobacco.

There have been several notable developments in the U.K. cigarette market this year. The first is that the new U.K. Government's budget promulgated on June 12, 1979, increased the value added tax on cigarettes from 8 percent to 15 percent and adjusted the relationship between ad valorem and specific excise taxes, thus narrowing the price range between large and small cigarettes.

Although total sales may suffer, king-size filter cigarettes will probably expand their share of the market from the present 50 percent to perhaps 80 percent over the next 2 years. The trend toward lower tar cigarettes is likely to continue and the market share for blended cigarettes, currently holding 1 percent of the market, may rise. Synthetic substitute cigarettes, introduced in mid-1977, have virtually disappeared.

The robust export momentum of recent years was thwarted by a stronger pound sterling in 1978. Shipments of cigarettes dropped almost 2 percent, compared with the 11 percent rise in the previous year. However, shipments to the EC, now 29 percent of U.K. exports, increased by 6 percent last year and cigarette sales to the United States and North Yemen more than doubled.

JAPAN—In 1978, Japanese factories produced an estimated 301.4 billion cigarettes, 2.4 billion less than in 1977. Sales totaled approximately 301 billion pieces of which 3.5 billion were imported (or about 1.2 percent of consumption). Over 99 percent of all tobacco products sold were cigarettes, of which 97 percent were filter brands. In recent years, sales of brands having less oriental leaf and more burley tobacco have increased.

From 1958 through 1977, tobacco sales in Japan trended upward at 10 billion pieces per year. Only once did sales slip below the previous year's level, and that was in 1976 following a 50-percent increase in prices. In 1978, however, sales remained at about the previous year's level and Japanese officials suspect that per capita consumption may have finally peaked. During 1978, Japan witnessed the emergence of antismoking campaigns that resulted in restrictions for smoking in some public buildings. This, coupled with an expected cigarette price increase, could reduce consumption by some 2 percent to about 295 billion pieces in 1979.

BRAZIL—Brazilian cigarette production rose 6 percent in 1978, to 137 billion pieces. A similiar increase is forecast for 1979, despite a substantial price hike that became effective January 1, 1979. The median

price increase was 33 percent; this compares with an inflation rate of 48 percent over the 14 months since the last price adjustment.

The Brazilian cigarette blend remains predominantly amarelinho tobacco (a native flue-cured type), with this type accounting for 40-45 percent of the leaf used by Brazilian manufacturers. Virginian flue-cured accounts for 20 to 25 percent and the balance is divided equally between burley and galpao comum—a native, dark air-cured type. Over 90 percent of the cigarettes sold were filter-tipped.

Most of Brazil's tobacco exports are in the form of unmanufactured leaf; cigarette exports are nearly insignificant at an estimated 900 million pieces in 1978. This level of cigarette exports was approximately 31 million pieces less than the previous year's level despite a wide range of export incentives including exemption from some taxes, tax credits, and access to subsidized credit to finance production for export. Nearly all of Brazil's cigarette exports are destined for the Paraguayan market. Imports of manufactured tobacco products are prohibited.

POLAND—Though Polish cigarette output rose only 1 percent in 1978 from the previous year's level, the share of filter-tip production increased from 37 to 41 percent. The output of cigarettes containing U.S. tobacco (all filter-tipped) climbed from 4.5 billion pieces in 1977 to over 5.0 billion pieces in 1978. Cigarette imports remained steady at an estimated 1 billion pieces, mostly from Bulgaria and Albania. Per capita cigarette consumption rose to 2,573 pieces from 2,550 in 1977 but may stabilize as a result of the February 1979 increase in cigarette prices.

BULGARIA—For the second year in a row, Bulgaria lost to the United States its traditional ranking as the world's largest cigarette exporter, although the country's exports—about 64.0 billion pieces, or 80 percent of its total output—increased by 4 percent over those of the previous year. With no duties, plus the special production/distribution arrangement among COMECON countries, Bulgaria will likely remain the major supplier of cigarettes to the USSR and East European countries.

INDIA—Cigarette production reached 71 billion pieces in 1978, an increase of 5 percent over the previous year's level. The decline in the filter-tip share of output continued during 1978. An estimated 20 percent of all cigarettes produced during 1978 were filter-tipped compared with 21 percent for 1977.

The Government's 1979/80 budget revealed a scheduled removal on the excise duty on unmanufactured tobacco, with the loss in revenue to be offset by increased duties on manufactured tobacco products. The effect of the announcement was an immediate hike in tobacco-product prices at the retail level. The price increases are expected to result in reduced demand, especially for the more expensive cigarettes, as smokers lower consumption or switch to less expensive brands or bidis (inexpensive cigarettes wrapped in tree leaves).

CANADA—Cigarette production in 1978 fell sharply to an estimated 62.1 billion pieces from the 65.5 billion pieces produced in 1977. However, 1977 carryover stocks were in the neighborhood of 2-2.5 billion pieces greater than normal, so that 1977 production exceeded sales. Production in 1978 was more in line with sales as purchases of domestically produced cigarettes in 1978 numbered 63.0 billion pieces, unchanged from the 1977 level.

Imports of cigarettes in 1978 increased 9 percent over those of the previous year. Imports from the United States, which accounted for 95.8 percent of total Canadian cigarette imports, reached 518.3 million pieces compared with 425.1 million pieces during 1977.

Canadian exports continued the uptrend of the past several years. Exports to the United States in 1978 totaled 349.9 million pieces compared with 343.3 million pieces in 1977. Shipments to the United States in 1978 accounted for 70 percent of Canadian exports, reflecting the continuing annual increase in demand for Canadian brands by the growing Canadian population in the United States.

Production and sales of domestically produced cigarettes are expected to remain at the 63-billion-piece level during 1979. Imports should continue to increase—providing there are no major changes in the tax structure—as Canadians develop a taste for foreign-produced cigarettes.

INDONESIA—The demand for clove-flavored (Kretek) cigarettes continued to outpace that of "white" cigarettes. Kretek cigarette sales in 1978 climbed 6 percent above 1977 levels, accounting for 63 percent of the 67.89 billion cigarettes sold in 1978. White cigarette sales climbed by 10 percent, reversing a recent downward trend.

Total production climbed by 6 percent during 1978 to 68.4 billion pieces, matching the increase in demand. Next year, however, sales of both types are predicted to decline, though most sharply for the Kretek type, as consumer purchasing power in Indonesia is eroded by inflation, and cigarette prices move higher to keep pace.

REPUBLIC OF KOREA—Production of filtered cigarettes in 1978 increased to 57.9 billion pieces, a 16 percent gain over 1977 output. However, nonfiltered cigarettes, which are primarily consumed by rural people, slumped 49 percent to 4.9 billion pieces.

Growth in domestic cigarette consumption and the switch to filters should continue in 1979, with total output forecast at 70.4 billion pieces. An additional processing plant in Wonju is now under construction and is scheduled for completion in 1982. When completed, it will produce 12.7 billion pieces annually, upping cigarette production for each of the next several years.

TURKEY—About 56 billion cigarettes were produced by Turkey in 1978. This was a 2.2-billion-piece decline from the previous year's. The Turkish Tobacco Monopoly also contracted for some 10 billion filter cigarettes to be manufactured in Yugoslavia, raising the total number of cigarettes supplied to Turkish consumers to about 66 billion. Of these, some 52 percent were filter cigarettes.

To meet the growing demand for filter cigarettes, the Monopoly has extended the agreement with Yugoslavia for another year and also has reached a similiar agreement with Bulgaria. With these agreements, Yugoslavia will manufacture 12 billion and Bulgaria will produce 6 billion filter cigarettes for the Monopoly during 1979.

PHILIPPINES—Estimated cigarette production in 1978 was 50.92 billion pieces, 1 percent below the previous year's total. Output of aromatic or American-blend cigarettes increased to 43.85 billion from 41.07 billion in 1977, while production of native cigarettes (native leaf) declined by 25 percent to 7.7 billion in 1978. Nearly 86 percent of the total cigarette output is filter-tips with 77 percent menthol-lated. Cigarette imports leaped 86 percent during 1978 to 218 million pieces. About half came from the United States, 31 percent from the United Kingdom, and the remainder from Hong Kong.

The outlook is for increased consumption of American-blend cigarettes. However, the downtrend in per capita consumption of all cigarettes will probably continue if the declining purchasing power of the Philippine consumer is unabated.

HONG KONG—Production of cigarettes fell 6 percent in 1978 to 3.69 billion pieces. Imports more than offset the decline, rising from 5.76 billion pieces in 1977 to 7.9 billion in 1978. At present, local production accounts for only 30 percent of consumption since Hong Kong smokers show a decided preference for imported U.S. cigarettes. The United States accounted for 83.7 percent of all imports, followed by the United Kingdom with 13.5 percent. With an increasing population and youngsters starting to smoke at an earlier age, the market for imported cigarettes can be expected to expand.

1/ INTERCEPT - TREND VALUE OF PRODUCTION WHEN X EQUALS ZERO (I.E.: X = 0 1964). 2/ SLOPE - THE CHANGE IN THE TREND VALUE OF PRODUCTION FOR A ONE UNIT CHANGE IN TIME (I.E.: ANNUAL CHANGE). 3/ A VALUE BETWEEN 1 AND -1 THAT MEASURES THE DEGREE OF LINEAR ASSOCIATION BETWEEN TIME AND PRODUCTION. THE LARGER THE ABSOLUTE VALUE OF (r), THE HIGHER THE DEGREE OF LINEAR ASSOCIATION BETWEEN THEM. 4/ A MEASURE OF THE AMOUNT OF VARIATION OF THE ACTUAL PRODUCTION FROM ITS TREND VALUES. 5/ NINETY-FIVE PERCENT CONFIDENCE INTERVAL: IT CAN BE SAID, WITH 95 PERCENT CONFIDENCE, THAT THE CIGARETTE PRODUCTION WILL FALL WITHIN THE INTERVAL.

SUMMARY

World inflationary pressures and strong demand for high-quality flue-cured and burley tobaccos pushed world tobacco prices higher in 1978. In general, prices paid to growers were up less than the value increase of tobacco entering world trade.

The slowdown in the rate of increase in grower prices occurred in part because of relatively high world supplies of filler-quality leaf tobacco and a general slowdown in leaf consumption. Flue-cured grower prices measured in the currency of the major producing countries of Brazil, Canada, and Korea were up 41 (86), 7 (5), and 14 (21) percent, respectively, in 1978 (1977). Strong demand for the vintage quality 1978 U.S. flue-cured crop pushed prices up 14 percent.

World import prices during 1978 posted significant increases in most major importing countries. When expressed in U.S. dollars, increases of 24 (6), 15 (11), 21 (13), and 23 (13) were registered in the United Kingdom, West Germany, Japan, and the Netherlands, respectively, during 1978 (1977).

The outlook for 1979 is for moderate increases in world tobacco prices. Continuing inflationary pressures, higher shipping costs, and strong demand for certain high-quality grades will likely continue to push prices upward during 1979, but stagnant world leaf utilization, high carry-in stocks, and soaring interest rates may moderate the increase.

U.S. LEAF TOBACCO EXPORTS RECOVER IN 1978/79, VALUE SETS RECORD

Summary

Unmanufactured tobacco ranked sixth among agricultural commodity exports during FY1979 and contributed a record $1.29 billion to the U.S. balance of payments. Manufactured tobacco added $909 million dollars to the tobacco export account, bringing the total to over $2.2 billion, up 20 percent when compared to FY1978. The value of duty paid imports rose only 7 percent to $449 million leaving a record net tobacco trade balance of $1.75 billion.

Leaf export volume rose 5 percent to 286,835 tons. The European Community increased purchases by almost 19,500 tons as all members except Italy, Belgium, and Luxembourg took more leaf than in FY1978. Increased shipments of flue-cured and fire-cured tobacco were primarily responsible for the higher exports. Most foreign customers took advantage of the plentiful supplies of vintage quality flue-cured tobacco to replenish stocks during FY1979; flue-cured exports were up 9 percent last year.

Manufactured product exports continued the dramatic uptrend of recent years. Cigarette exports rose 11 percent in volume and 24 percent in value. Shipments to most major markets increased despite a 12 percent increase in the average value of cigarettes. Exports to the EC were up 14 percent to a record 18.2 billion pieces. A large portion of these cigarettes are transshipped to other European, African and Middle Eastern Countries.

Duty paid imports for consumption of unmanufactured tobacco reached 165,000 tons during FY1979. Actual arrivals of leaf rose 36 percent to over 200,000 tons as oriental leaf imports jumped 48 percent and cigar tobacco imports soared 64 percent.

Outlook

U.S. tobacco export volume in FY1980 will do well to reach the FY1979 level. The value is expected to reach $1.4 billion, up 10 percent from FY1979. The major factors that will affect tobacco trade in the period ahead are the relative strength (or weakness) of the U.S. dollar, large overseas stocks of U.S. leaf, reduced quality of the 1979 U.S. leaf crops and a slowdown in the rate of growth of world tobacco consumption.

The weakness of the U.S. dollar, compared with the currencies of many nations that import U.S. leaf, could make our tobacco relatively attractive costwise, however, other factors may tend to offset this advantage. Foreign buyers, who took advantage of the plentiful supplies of high quality tobacco from the 1978 crop to rebuild their inventories, are unlikely to purchase heavily from the current crop. Additionally, many manufacturers have experienced a slowdown in the rate of use of leaf during the past year as the growth rate of world cigarette output has slowed. These factors, combined with the poorer quality of both the flue-cured and burley crops and the desirability to reduce stocks because of high interest rates, limit our prospects for increasing leaf exports during FY1980.

Manufactured tobacco exports, however, are expected to post another significant increase during the coming year. Cigarette shipments may top 80 billion pieces and the total value of tobacco product exports will likely exceed $1 billion for the first time.

Imports are also expected to increase moderately. Based on current indications duty paid leaf imports may reach 175,000 tons valued at more that $450 million.
